

ENGR 1451/2451: Exploratory Data Science

Pitt Course Tool Chain: Slack, Canvas, JupyterLab, and GitHub

Prof. Paul W. Leu
University of Pittsburgh

Fall 2026

One Tool, One Primary Job

Canvas

Official course hub

Instructions, due dates, submissions, grades

JupyterLab

Working environment

Python notebooks, terminals, files, computation

Slack

Class conversation

Questions, troubleshooting, discussion, reminders

GitHub

Versioned repository

Course files, your fork, commits, remote backup

Pitt Course Loop

What Belongs Where?

Canvas is authoritative for

- due dates and assignment instructions;
- required submission files;
- grades and private feedback.

GitHub records

- your fork of the course repo;
- committed notebook changes;
- a remote copy of your work.

JupyterLab is where you

- edit notebooks;
- run Python code;
- inspect output before submitting.

Slack supports

- public course questions;
- troubleshooting with error text;
- shared announcements and reminders.

Submission Rule

Push to GitHub

- commit the completed .ipynb;
- push to **your fork**;
- verify the latest commit online.

Submit to Canvas

- completed .ipynb;
- exported .pdf;
- any extra files requested.

Good Slack Questions

Include

- assignment name and file path;
- exact command or code;
- complete error text;
- what you already tried.

First-Day Readiness Check

- ✓ Canvas opens.
- ✓ Slack opens and you can post.
- ✓ Your GitHub fork exists.
- ✓ Hugen/Jupyter launches.
- ✓ You can open the course repository.

Details are in W01B

- fork and clone;
- SSH key setup;
- Jupyter on TEACH;
- commit, push, PDF, submit.
